HDWG Groundwater IE Update

HDWG Workshop

Ispra, Italy

<Boyan Brodaric, Nate Booth>

16 March 2010

OGC-WMO Hydrology Domain Working Group GroundWater Interoperability Experiment (GW IE)

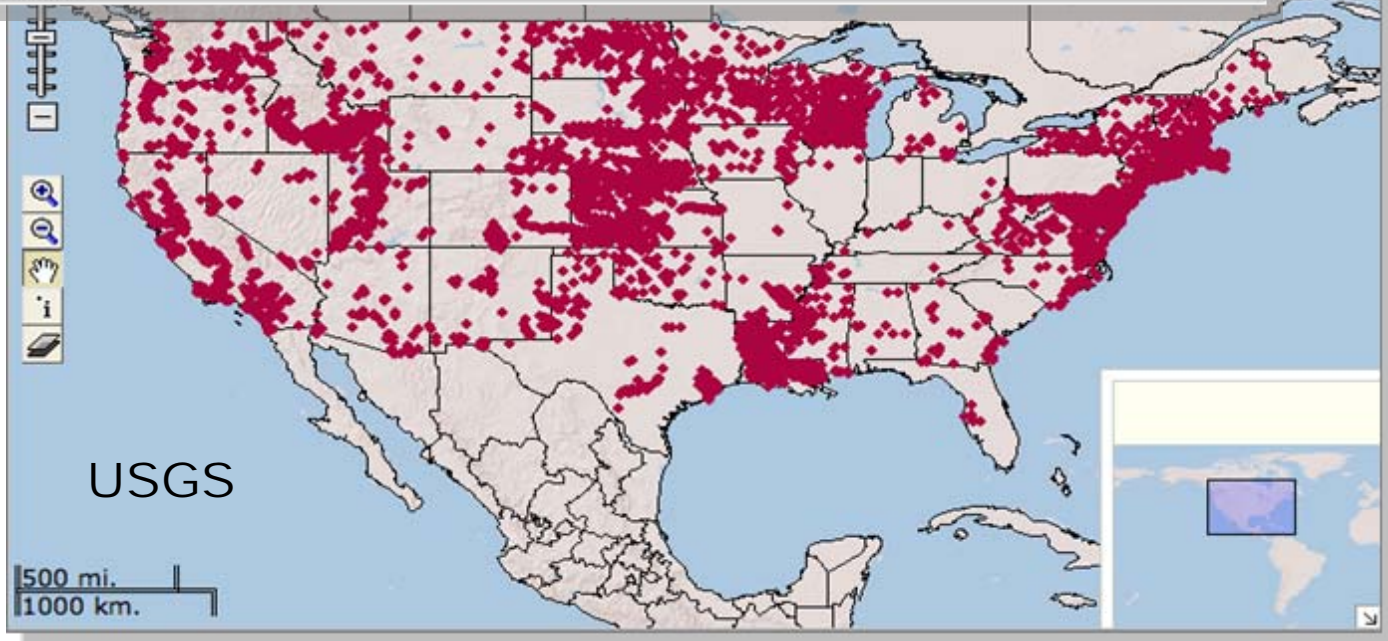

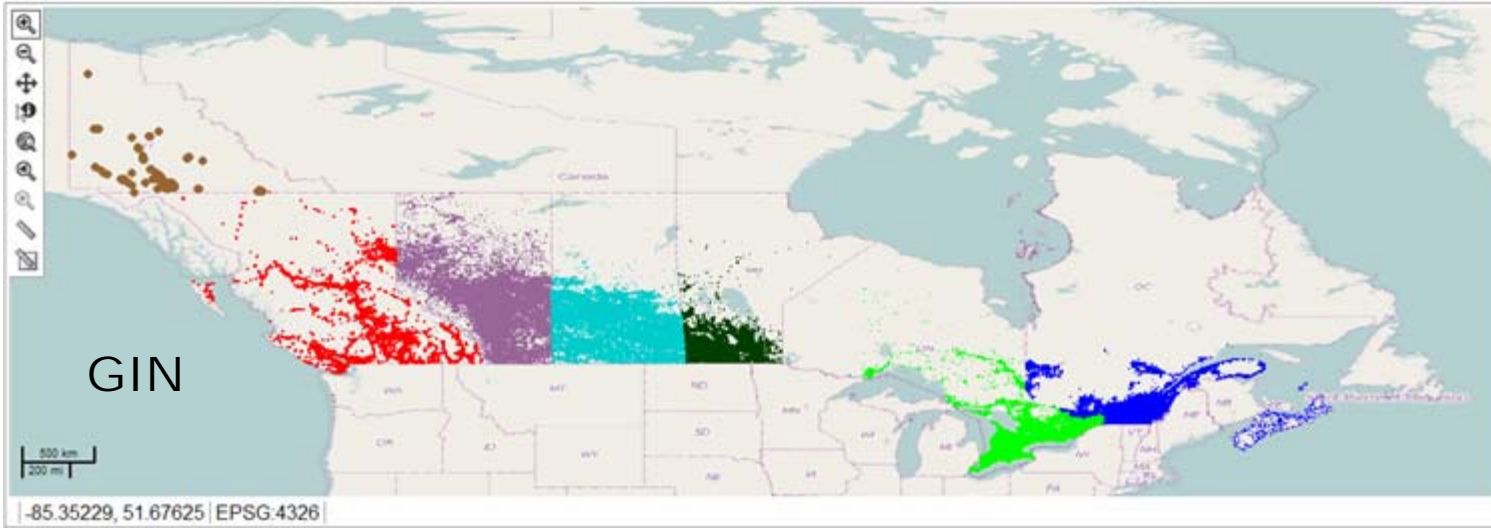

- **GW IE Description**
- **Interim Results: Dec 2009**
- **Interim Results: Mar 2010**
- **Interim Lessons Learned**
- **Demo**

- **GW is a significant source of water for humans**
- **Ground/water feature and observation data**
 - **distributed:** many data providers (~1000 in Canada alone)
 - **heterogeneous:** structure and content (e.g. level, flow, quality)
 - **massive instances:** millions of wells (features/sensors) & time series (observ.)
 - **massive schema:** thousands of properties (e.g. for quality)
 - **few standard services:** very few OGC gr/water services
- **Existing schema standards for water**
 - WaterML (USA), GroundwaterML (CAN), WTDF (AU), WQX (USA), O&M,...
 - consolidation in WaterML 2 via OGC HDWG
- **Relevant OGC Web service standards**
 - SOS, WFS, WMS, CSW

Sensor & well locations

- **Objectives**

- Advance design of WaterML2 re: GW data
- Advance fit of OGC services with WaterML2 and GW data
- Advance US-CAN cross-border GW data exchange

- **Timeline**

- Dec 2009 to Dec 2010

- **Participants**

- US (USGS, SDSC/CUAHSI, NCSA/ISWA, 34North)
- CAN (GSC, UCalgary)
- AU (CSIRO)
- EU (Kisters)

- **Use-case**

- View, query, download: water wells & levels at US-CAN border

- **WaterML2**
 - WaterML2 alpha schema tested & coordinated with GWML
- **OGC Services**
 - GSC: static water levels and wells (SOS, WFS, WMS)
 - USGS: dynamic water levels and well locations (SOS, WMS)
- **Clients**
 - GSC client implemented
- **Demo**
 - presented at OGC TC Dec 2009, AGU Annual meeting 2009
- **Remaining Issues**
 - WaterML2 schema: feature-of-interest and geometry
 - Services: SOS for massive networks, CSW for sensor discovery
 - Implementation: more clients, more data

Interim Results: Dec 2009

Sensor Observation Service (SOS)

Total number of observations: 1

Observation 1:

Name:

Sampling time: 1964-07-14

Procedure: un:ogc:object:Sensor:938

Observed property: un:ogc:df:property:OGC:GroundWaterLevel

Feature of interest: Water Well #938

Data:

Sampling period:

- Beginning: 1964-07-14
- End: 1964-07-14

Values:

- 1.8288m (1964-07-14T00:00:00-05:00)

Developed by:
LCNP

Go

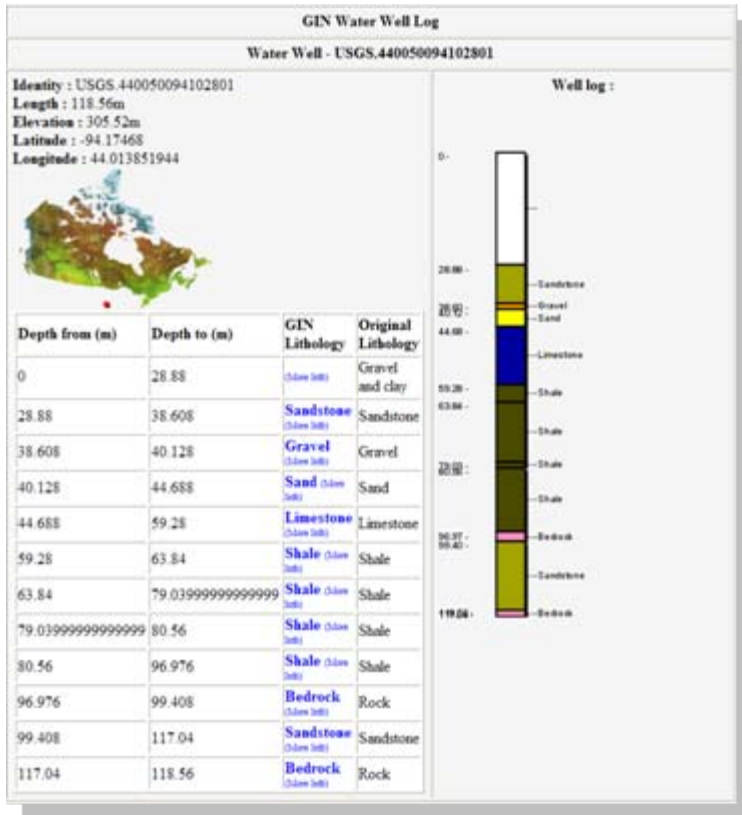

- **WaterML2**
 - more analysis resulting in design recommendations
- **OGC Services**
 - USGS: water wells (WFS)
 - NCSA/ISWA: dynamic water levels—in progress
- **Clients**
 - 34North client implemented
- **Demo**
 - to be presented at HDWG workshop 16 Mar 2010, Ispra
- **Next Steps**
 - implement WaterML2 beta by June 2010
 - refine/add services and clients by June 2010
 - wrap-up Dec 2010 at OGC TC Sydney, AU

Interim Results: Mar 2010

USGS WFS well service

34North client

Lessons Learned

- The model – (1) Data Providers, (2) Schema & Services Design and (3) Client Development is good.
- Coordinating North America, Europe and Australia telecon leaves few good time options
- Knowledge of the IE process and rules critical for assembly phase
- Cross-border test case is interesting and politically useful but not mandatory for evolving requirements, prototyping, testing and validation
- Need proper coverage of integration use cases implemented in test clients to validate IE
- In GW IE, using an existing and well specified client makes for very effective IE feedback

Lessons Learned

- Quarterly milestones appropriate and necessary
- Monthly scoping calls work but need to be carefully managed
- Informal & direct technical exchange between monthly scoping calls mandatory
- Still need efficient process to communicate out to SWGs
- Testing of other areas of OGC stack equally important to IE and HydroWG (besides WaterML2 and SOS) (i.e. GWML via WFS, WMS getFeatureInfo)
- Custom SOS servers mandatory for testing the evolving standard(s)
